

Yes, I do benefit from listening to xm. because the local fm stations don't give me the traffic and weather reports every five minutes. I have to rely on someone calling the radio station telling them there is an accident, then wait for them to tell me when they have a chance during there so called morning shows. I signed up for xm cause I happen to like the programming and what they offer for local services. So please reject this petition 04-160. It just seems to me that if something does really well in this country, why is there always someone trying to bring it down? Think about the other people that use xm radio, like the truckers, business people going to another major city and need info instead of searching around the fm or am dial for it, travelers on vacations also.
